

Armstrong recorded 2.3 inches of precipitation for the week and Neely-Kinyon recorded 1.63 inches.

We basically had 5 days that field work was being done in the area. A lot of corn was put in the ground in southwest Iowa.

Activities:

Wyffel's corn plots were put in

Stine corn plots were put in

Bulk corn was finished up at Armstrong

Randy got cool season garden plants put in, along with electric fence for rabbit control

Sold and loaded out 2 loads of corn

Mike Witt brought down plot planter to Neely-Kinyon for his project at the farm

Monitored black cutworm and true army worm counts

Randy started the process to sign up a new producer near Greenfield to do our baling there

Jim continued to work on equipment and get final touches done on plot sprayer

Jim met with an area producer for upcoming On-Farm trial

Continue to make plans for the FIMS bunk project

Worked on pasture fence

Hoping to get some warmer weather back in the area. Ground temperatures are still a concern with this last weekend cool and damp conditions. We will be monitoring the situations closely.
