

Crops are developing quickly with the warmer temperatures, but could use some moisture before long. Armstrong received .16 of an inch precipitation for the week and Neely-Kinyon (NK) received .09 of an inch.

Activities:

- Randy cultivated soybeans at NK
- Mowed Monarch habitats at Armstrong
- Spot sprayed low diversity plots and mowed high diversity plots in the Biochar study
- Spot sprayed in pasture
- Mowed and baled hay at both NK and Armstrong
- Randy worked in garden and is now picking cabbage, kale, broccoli, and summer squash
- Loaded out one load of corn
- Jim continues to put in some On Farm plots around the area
- Jim went to NK and sprayed some bulk acres
- Went through carcass data for the McNay bulls and sent off to project leaders
- Poured cattle in pasture for flies
- Worked more on FIMS plans in the feedlot and got brackets ordered to be mad
- Started some plans on fencing back in the cattle hoop barn to be able to hold cattle there at least temporarily
