

It was another damp week around here with only about one day of harvest. Armstrong recorded 1.41 inches of precipitation for the week and Neely-Kinyon had some weather station issues but recorded .89 of an in on Saturday (10/14 ).

Activities:

- Checked weather station at Neely-Kinyon and got the problem solved
- Herbicide group here to work on plots and leave harvest maps for us
- Jim got some On Farm plots out
- Continue to check out harvest equipment and calibrations
- Combined some bulk corn and opened up some plot areas
- Worked on fencing at the hoop building—will need to hold some cattle there temporarily in a few weeks
- Electrician here to hook up new bulk bin augers and replace a fan motor on grain bin
- Worked on manure spreader

Hope you have a good week and be sure to contact me with any questions and concerns about your plots. Looks like we are going have a good week of harvest
